A Only AfD speeches are followed by a more intuition-based reply

AfD-specific contrast -0.12 (95% CI -0.16 to -0.09)

all other parties pooled

AfD
Left
Greens
SPD
FDP
CDU/CSU

−0.15 −0.10 −0.05 0.00 0.05 0.10

Contagion effect after a speech by this party

(EMI of next minus previous speech by another party)

B SPD, FDP, Greens and Left react, CDU/CSU does not

Left (n = 253)
Greens (n = 1,106)
SPD (n = 2,288)
FDP (n = 1,439)
CDU/CSU (n = 1,385)

−0.3 −0.2 −0.1 0.0 0.1 0.2

Contagion effect after an AfD speech, by replying party

C The reaction is confrontation: replies that name the AfD

-0.37

reply names the AfD (n = 1,509)

-0.01

reply does not name the AfD (n = 4,962)

−0.5 −0.4 −0.3 −0.2 −0.1 0.0 0.1

Contagion effect after an AfD speech

D The reaction is local: it fades within a few speeches

Contagion effect (EMI)

0.050 0.025 0.000 −0.025 −0.050 −0.075 −0.100 −0.125

after AfD speeches
after other parties

1 2 3 5

Window: k speeches on each side

E About two thirds of the reaction survives adjustment for who speaks when (permutation: AfD label reassigned at random within sittings; mean and 95% range)

raw contagion effect after AfD speeches -0.09
permutation null (2,000 draws)
OLS adjustment -0.06
speaker fixed effects -0.05
coarsened exact matching -0.07
inverse-probability weighting -0.04
1:1 nearest-neighbour matching -0.02

adjusted estimates condition on debate position, year, replying party, EMI of the speech before and the debate's prior register

−0.150 −0.125 −0.100 −0.075 −0.050 −0.025 0.000 0.025 0.050

Effect of an AfD speech on the EMI of the reply
